

Tell your readers how long they'll need to get through all of your gibberish, with this clever jQuery plugin.  
With ReadRemaining.js TL;DR is a thing of the past.

[Download](#)[Demo](#)[Fork on github](#)**PERSONALIZED**

THE TIME IS ESTIMATED BASED ON THE USER SCROLLING SPEED

**NON-ANNOYING**

IT CAN BE SET TO APPEAR ONLY WHEN THE USER IS ACTUALLY READING.

**FULLY CUSTOMIZABLE**

BOLD COMIC SANS? NO PROBLEM, JUST SET THE CSS. BUT... WHY?

**FLEXIBLE LAYOUT**

TAKES INTO ACCOUNT TEXT, IMAGES OR EVEN VIDEOS.

12m 46s

This is a text. This is a long long text. This is an awful long text. I like spending time reading as much as the next guy. But this is an obscene long text. You know what's long? This text. I bet you thought I was going to start a yo mama joke. You judge me wrong, I'm not a comedian. I know only one joke: a skeleton walks into a bar and says I want a beer... and a mop. That's hilarious. You know what's totally not funny? Reading a long text without knowing how long it will take.

Don't get me wrong, I enjoy scrolling. I wish I could spend all day scrolling. Is that a job anywhere in the world? Imagine that, if someone pays you just for scrolling. Scrolling and reading. I can make a profession of it. My business card will read "John Kite, scroller and reader for hire". I would be traveling all around the world, scrolling and reading like a boss. There will be movies about me. A trilogy called The Scroller, with Jason Statham playing me. I totally look like Jason Statham. You can read this with the Jason Statham voice in your mind from now on. That will be awesome. If I could do that voice I would never shut up.

But this is the real world and nobody will pay you (or me) for scrolling and reading. Although there are truly strange jobs out there. My brother in law works in a mattress factory as quality inspector, spends eight hours a day sleeping on the job. And when he returns home, he takes a nap. That's a lazy son of a gun. But I'm not lazy and neither you are. I have a lot of things to do today and I'm not gonna waste all day reading this.

How long will it take me to read all this text anyway? Well, we have ReadRemaining.js running so you can stop scrolling right now and a wild indicator will suddenly appear. ReadRemaining.js is super effective. Take a moment to read the ReadRemaining.js indicator. How long is gonna take to get to the end of this text?

I know what you're thinking: what if I'm a guy that reads slow. You know, like a student from The Derek Zoolander Center For Kids Who Can't Read Good And Wanna Learn To Do Other Stuff Good Too. ReadRemaining.js have been thinking about guys like you. Yeah, if you read slow, the algorithm will calculate the time considering your reading speed. That's awesome, right? And even what if you read even

1

Include jQuery into your document.

```
<script src="https://ajax.googleapis.com/ajax/libs/jquery/2.1.3/jquery.min.js"></script>
```

2

Include plugin's code.

```
<script src="readremaining.jquery.js"></script>
```

3

Include the css file or the styles into your main css.

```
<link rel="stylesheet" href="css/rr_light.css"/>
```

4

Call the plugin.

```
$('body').readRemaining();
```

If you need more info about methods, settings and possibilities, [read our documentation](#).

You can't go back in time but you can choose how you spend it.
